

## FLASHLIGHT POWERBANK

### 10.500MAH

External battery 10.500mAh with flashlight

REF : XT-XRF101

EAN : 8720195102434

EXISTS IN : BLACK

## DESCRIPTION :

This Xtorm Flashlight Power Bank is the perfect gadget for any explorer. A powerful flashlight which also gives #MoreEnergy to your smartphone, camera, headlight or GoPro thanks to the power bank function.

## STRENGTHS :

### A ray of light in every situation

Whether you go camping, walk the dog, or the fuses in your house blow; with the Xtorm Flashlight & Power Bank you always have the right gadget at hand. Handy during a power outage and a real asset to your emergency kit. The robust flashlight-power bank combination from aluminium has more than enough energy and lights up any situation thanks to its dual function.

### Using the flashlight

Point the head of the flashlight to the ground whenever you turn it on and avoid looking directly into the light. Press the button once to see the current battery level and press it again to switch on the light. This prevents it from switching on accidentally in your bag or suitcase. Each press of the power button switches between the light modes or turns the flashlight off. Holding down the power-button dims the light so you can adjust the brightness to suit any situation. The zoom function allows you to change the width of the light beam.

### Flashlight for all distances up to 605 metres

The brightness of the powerful flashlight is a minimum of 300 and a maximum of 1000 lumens with LED type 15W SMD. On the low brightness of 300 lumens the torch will remain lit up to 25 hours and illuminate up to 295 metres. At the highest brightness of 1000 lumens, it will remain lit for 10 hours with a distance of 605 metres! Within these two settings, you can adjust the width of the light beam by zooming in and out. You can switch between the wide and focussed light beam by pulling the top part.

### 10.500mAh Power Bank with fast-charging 20W SuperCharge

If you suddenly find yourself without power, use the 2-port power bank function to charge your devices. With the USB-C 20W SuperCharge port, you can quickly and easily charge your smartphone, tablet, GoPro or headlamp. Of course, you can

also use the USB-A 18W port to charge small devices. If you want to charge two devices simultaneously, the maximum combined output is 10W. You can, of course, use the flashlight at the same time.

#### **Quickly recharged**

Thanks to its 20W input, the rechargeable flashlight is fully charged within 2.5 hours and ready to shine for up to 25 hours. After charging, the internal battery capacity of 10.500mAh can be used as a flashlight, power bank, or a combination of both. The LED lights indicate the current battery level. The handy strap and comfortable grip make the Flashlight Power Bank easy to handle.

#### **Robust design with IP44 rating**

The housing of the Flashlight Power Bank is made of black aluminium and the IP44 rating makes this power bank-flashlight combination water and dust resistant. The 6-layer Xtorm safety check provides protection against overvoltage, short circuit and overcharging, among other things. The details and finish complete this design and all together makes this Flashlight Power Bank perfect for any situation.

### **CHARACTERISTICS :**

- Powerful flashlight with different intensities
- Lights up to 605 metres with 1000 lumen
- Portable battery of 10,500mAh – flashlight and power bank combination
- Power bank with USB-A and USB-C output
