

ENOCEAN INTERRUPTEUR MURAL POUR CHAUFFAGE

Interrupteur mural sans fil

REF : NO-CWS-2-FP-01

EAN : 3700313925157

EXISTS IN : WHITE

DESCRIPTION :

The NodOn® wall switch is wireless - no batteries, EnOcean® compatible. The mechanical energy created by pressing the button is converted, via a revolutionary magneto-resistive generator, into sufficient electrical energy to send a radio message to the device to be controlled.

The wall switch can be used to control any EnOcean® compatible device, such as the NodOn® remote control socket, or a home automation system. Its buttons are marked with icons representing 4 pilot wire heating commands: Comfort, Frost Protection, Off and Eco. It is therefore perfectly complementary to the NodOn pilot wire heating module.

The switch has a mounting plate to mount it easily in the house: By using the screws of a flush-mounted pot, by screwing it to the wall, or simply by sticking it with the double-sided adhesives on the back of the plate.

STRENGTHS :

Power supply: Magneto-resistive (without battery)

4 buttons for controlling 4 pilot wire commands

Wall mounting with double-sided adhesive tape (included) or screws (not included)

Operating temperature: 0°C to 40°C - Altitude: 2000m

EnOcean® Radio Protocol: 868.3MHz - EEP: F6-02-01

Range: 30m indoor
